

# How to Link Two Thump Boosted Loudspeakers

<http://mackie.com/products/thump>

In this series so far we have covered basic setup of your Thump Boosted speakers, pairing your iOS or Android device via Bluetooth, as well as how to set them up for a solo performance. For a refresher on how to setup your Thump Boosted speakers and how to connect your your device to your speakers via Bluetooth, check out these links:

Once you have everything connected and powered up, you will be able to connect your two Thump Boosted loudspeakers together...wirelessly! We will cover how to accomplish that in this document.

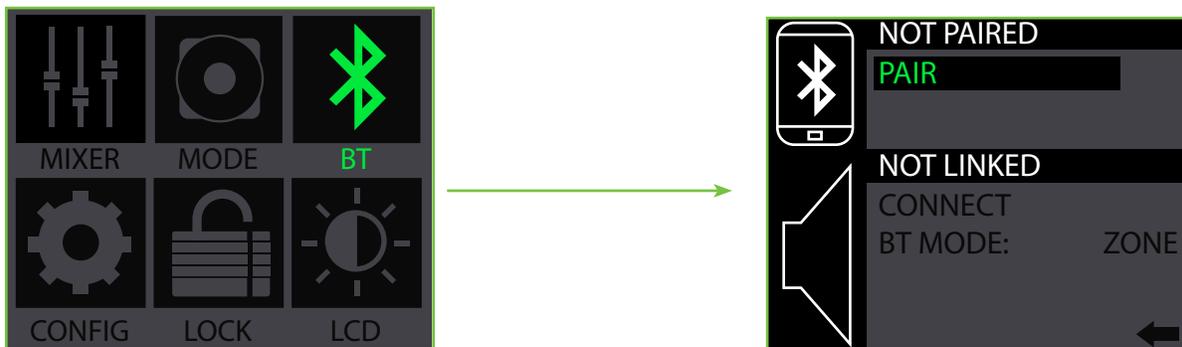

# How to Link Two Thump Boosted Loudspeakers

<http://mackie.com/products/thump>

If you follow these steps, you will be able to link your two Thump Boosted loudspeakers together wirelessly. The steps to link your Thump Boosted speakers are similar to that of pairing a device via Bluetooth.

- 1) To link wirelessly, you will go to the Menu Screen on one of your Thump Boosted speaker and select the “BT” option.
- 2) Make sure “BT” is illuminated in your Main Menu screen and push the speaker control knob.

- 3) In the “BT” screen, rotate the speaker control knob to under where it says, “NOT LINKED” and make sure “CONNECT” is illuminated, push the speaker control knob.

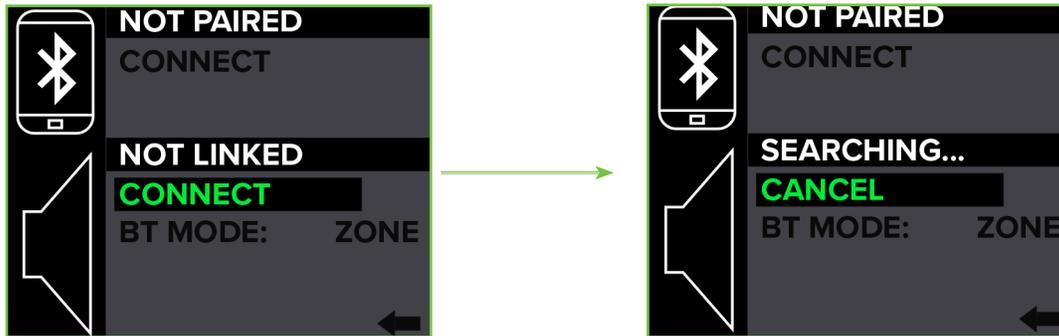

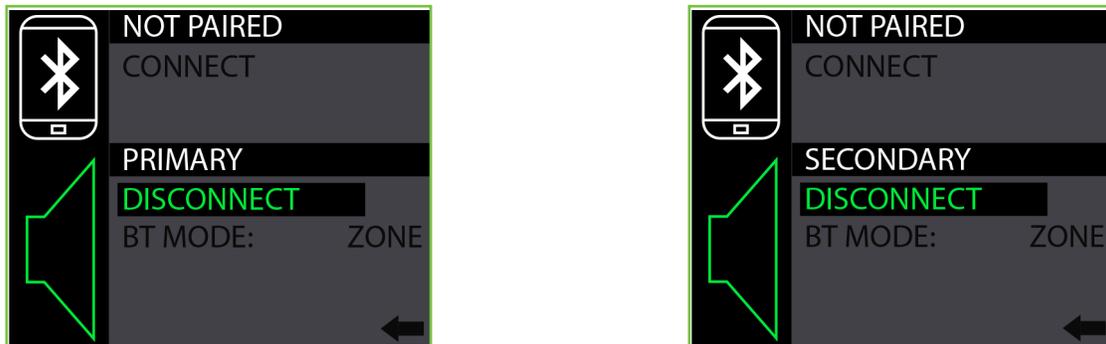

# How to Link Two Thump Boosted Loudspeakers

<http://mackie.com/products/thump>

- 4) The text “NOT LINKED” will then change to “SEARCHING...” and “CONNECT” will change to “CANCEL”. From here, you want to turn your other Thump Boosted loudspeaker on and follow steps 1-3 above on your second Thump Boosted.

- 5) If you turn on your other Thump Boosted and follow those same steps, the text “SEARCHING...” will change to “PRIMARY” on one loudspeaker and “SECONDARY” on the other. In addition, “CANCEL” will change to “DISCONNECT”.

Now, you can go ahead and select a Bluetooth mode you want to use.

**Stereo Mode** is your default two left and right loudspeaker setup, ideal for applications such as a party, DJ, etc., where you have a Bluetooth device paired and streaming music in stereo. The main level controls both speakers in this mode.

**Zone Mode** setting is the other option for loudspeaker setup, ideal for when speakers are placed in different locations and allows for separate main level controls. Thump Boosted loudspeakers in Zone Mode will receive a mono-summed signal.

- 6) Rotate the speaker control knob until “BT MODE” is illuminated and then push the knob in to enter and edit your “BT MODE”.

- 7) From here, rotate the speaker control knob until you get to the Bluetooth mode you want is illuminated: “ZONE” or “STEREO”. Push the control knob to select the mode.

Now you are ready to pump some audio through both of your Thump Boosted loudspeakers!
